Date: March 30, 2026

For the convenience of evaluation and smooth execution of the application without any unnecessary setup issues, I am also providing the **.env configuration file of my local application environment** along with this **project report**.

This has been included to ensure that the project can be **run and tested more easily without configuration-related hassles**, especially during demonstration or evaluation. The provided environment file contains the necessary local development configuration used during the implementation and testing of the project.

Introduction:

EventZen is a sophisticated, user-centric event management and ticketing platform designed to streamline the entire lifecycle of event organization. From intuitive event discovery and secure ticket purchasing to comprehensive attendee management and real-time analytics, EventZen offers a robust solution meticulously tailored to meet the diverse needs of attendees, event organizers, and system administrators alike.

Developed as a capstone project, the platform is built on a highly maintainable **monorepo structure** housing a true **polyglot microservices architecture** (integrating Java Spring Boot, .NET, and Node.js). This ensures both streamlined development and an exceptionally scalable user experience. Beneath the sleek interface lies a secure, event-driven backend ecosystem optimized for high-demand ticketing scenarios. It notably utilizes **SignalR web sockets** to provide instant, real-time updates for interactive seat layout booking, guaranteeing a frictionless reservation process by showing users live seat availability. Furthermore, the platform integrates **OpenStreetMap (OSM)** to deliver accurate, dynamic venue mapping for event-goers.

To guarantee unparalleled reliability and performance under load, EventZen leverages cutting-edge infrastructure components. It relies on **Apache Kafka** for robust asynchronous messaging, **Redis** for high-speed data caching, and **HashiCorp Vault** for strict security and central secrets management, all seamlessly containerized and deployed via **Docker**. Moreover, the platform employs a powerful, proactive observability stack consisting of **Prometheus** for deep system monitoring and **Grafana** for rich, centralized data visualization.

The application's deeply modular design ensures ease of maintenance, provides exceptional flexibility for future feature enhancements, and supports robust third-party integration capabilities. By focusing on the core challenges of modern event orchestration, EventZen demonstrates the perfect synergy of advanced software engineering and practical logistical solutions. It stands as a powerful, dependable, and production-ready tool for managing everything from intimate local gatherings to large-scale, high-traffic enterprise events effortlessly.

Objectives:

- **To design and develop a highly scalable event management and ticketing platform** utilizing a polyglot microservices architecture (Java Spring Boot, .NET, Node.js) for the backend and a highly responsive, dynamic frontend.
- **To implement a robust, modular monorepo structure** consisting of distinct core services, prioritizing secure user authentication, comprehensive event orchestration, and high-traffic ticket processing.
- **To demonstrate advanced frontend and backend integration** through optimized RESTful APIs for standard data flow, paired seamlessly with SignalR WebSockets to power real-time, interactive features such as live seat layout booking.
- **To ensure strict data integrity, security, and performance** by leveraging specialized databases alongside Redis caching, Apache Kafka for event-driven messaging, and HashiCorp Vault for secrets management—while thoroughly documenting the overarching system architecture, observability stack (Prometheus/Grafana), and API endpoints.

Technologies Used:

- **Frontend:** ReactJS (Single Page Application - SPA), Tailwind CSS, Axios
- **Backend:** Polyglot Microservices Architecture (Java Spring Boot, .NET, Node.js), REST APIs, SignalR WebSockets
- **Databases:** Polyglot Persistence utilizing MongoDB (NoSQL), MySQL (Relational), and Redis (in-memory caching)
- **Infrastructure & Messaging:** Docker (Containerization), Apache Kafka (Asynchronous Event Streaming), HashiCorp Vault (Secrets Management)
- **Observability & Monitoring:** OpenTelemetry (Distributed Tracing), Prometheus (System Metrics), Grafana (Data Visualization)
- **Mapping Services:** OpenStreetMap (OSM) for dynamic venue mapping
- **Version Control:** GitHub (implementing a structured Monorepo approach)

Project Structure

Front-End:

- **Framework Structure:** React.js (Single Page Application powered by Vite), styled with Tailwind CSS
- **Structure Overview:**
 - **frontend/src/app/pages/** - Contains all the top-level route components for different pages like Event Discovery, Dashboard, Seat Selection, etc.
 - **frontend/src/app/components/** - Houses modular, reusable UI components for a consistent design system.
 - **frontend/src/main.jsx & src/app/App.jsx** - The primary entry points for configuring and launching the React application.

- **frontend/src/styles/** - Contains the global CSS and Tailwind directive files.
- **frontend/public/** - Contains static files such as index.html, static imagery, and site icons.

Back-End:

- **Architecture & Frameworks:** Polyglot Microservices Architecture (primarily Spring Boot, alongside .NET/Node.js)
- **Structure Overview:**
 - **backend/services/** - The root directory housing all independent modular microservices (e.g., auth-service, event-service, ticketing-service, venue-vendor-service, finance-service).
 - **Internal Structure (Typical Spring Boot Microservice):**
 - **controller/** - Exposes REST API endpoints and manages incoming HTTP requests and SignalR WebSocket connections.
 - **model/** - Includes entity/domain classes mapped carefully to either MongoDB (NoSQL) or MySQL (Relational) databases.
 - **repository/** - Contains data repository interfaces for interacting with the distinct polyglot databases.
 - **service/** - Encompasses core business logic (e.g., processing real-time seat locks, managing transactions).
 - **resources/** - Houses configuration files (application.yml/properties) dictating database connections, Redis caching rules, and Kafka broker settings.

GITHUB LINK:

https://github.com/Mayukh-Haldar/Capstone_Project_Deloitte_CloudThat

Features & Core Modules

- **Authentication & User Module (auth-service):**
 - Rigorous user registration, secure login authentication, and comprehensive role-based access control (tailored for Administrators, Event Organizers, and Attendees).
 - Personalized user profile and account preference management.
- **Event Orchestration Module (event-service & venue-vendor-service):**
 - Intuitive event creation, scheduling, and publishing for organizers.
 - Seamless browsing of dynamic, highly accurate venue layouts and location data built on robust OpenStreetMap (OSM) integrations.
- **Real-time Ticketing Module (ticketing-service):**
 - Interactive, real-time seat selection and temporary layout locking powered instantly by SignalR WebSockets.
 - High-concurrency ticket reservation management engineered precisely to mitigate race conditions and double-bookings.
- **Finance & Transaction Module (finance-service):**
 - Frictionless, secure checkout experiences and seamless payment gateway integrations.
 - Comprehensive transaction history tracking, refund processing, and detailed financial reporting dashboards for organizers.

- **Notification & Alerts Module (notification-service):**
 - Immediate, asynchronous delivery of booking confirmations, e-tickets, and event reminders powered reliably by Apache Kafka event streaming.
 - Dynamic system alerts keeping users strictly updated on ticket availability and schedule shifts.

FRONT END FOLDERS AND FILES

src/app/components/

- **Contains reusable UI components and essential layout wrappers used across the application.**
 - **Navigation.jsx:** Implements the top navigation bar tailored for routing between core public and administrative pages.
 - **Footer.jsx:** The application's universal footer containing auxiliary links and information.
 - **ThemeToggle.jsx:** A utility component allowing users to switch dynamically between light and dark modes.
 - **RootLayout.jsx & AdminLayout.jsx & PortalLayout.jsx:** Dedicated layout wrappers providing consistent structure (sidebars, navs) across different application portals.
 - **RequireAuth.jsx & RequireAdmin.jsx:** Crucial higher-order components ensuring routes are protected and enforcing role-based access control.
 - **LoadingScreen.jsx:** A fallback UI displayed during suspense states or data fetching.
 - **ui/ folder:** Houses foundational design-system components (buttons, modals, inputs) built securely with Tailwind CSS.

src/app/pages/

- **Holds the individual page components of the application, with each file representing a major route or distinct functionality:**
 - **Home.jsx:** The dynamic homepage of the application featuring hero elements and quick links.
 - **Auth.jsx:** A consolidated authentication page seamlessly managing both login and signup flows.

- Events.jsx & EventDetails.jsx: Pages dedicated to browsing available events and viewing comprehensive event-specific details.
- SeatSelection.jsx: An interactive ticketing interface where users view OSM map layouts and select seats in real-time.
- EventCheckout.jsx: The secure payment and registration finalizing page for ticket purchases.
- CustomerPortal.jsx: The main personalized dashboard for attendees to manage their account.
- Tickets.jsx & TicketPass.jsx: Pages where users can view their purchased tickets and scannable QR web passes.
- CheckIn.jsx: A page designed for organizers to actively scan and manage attendee entry at physical events.
- Admin.jsx & AdminEvents.jsx & AdminVendors.jsx: The comprehensive administrative suite controlling event approvals, platform-wide metrics, and vendor management.
- Venues.jsx & VenueBookingCheckout.jsx: Interfaces facilitating the browsing and booking of physical venue spaces by event organizers.
- Finance.jsx & Reports.jsx: Powerful dashboards providing transaction history, revenue tracking, and detailed financial reports.
- AccountSettings.jsx: A centralized hub allowing users to update profile details and security settings.
- Notifications.jsx: The centralized inbox for users to view system alerts and booking confirmations.
- HelpCenter.jsx & TermsOfService.jsx & PrivacyPolicy.jsx: Essential support documentation and legal policy pages.

src/styles/

- **Holds the global styling strategy for the application.**

- Contains the core CSS files injecting Tailwind base directives, utility classes, and custom global theming variables.

public/

- **Contains absolute static assets essential for the initial page load.**
 - index.html: The core HTML template into which the entire React SPA is mounted.
 - Standard imagery, site favicons, and public fonts utilized globally across the application.

These Entity-Relationship Diagrams (ERDs) illustrate the comprehensive, distributed database architecture powering the EventZen ticketing and event management platform. They showcase the complex relationships between core entities across our distinct microservices. The models highlight how a **User**, governed by rigorous role-based access controls and permissions, can securely authenticate and manage their account. Within the event planning lifecycle, organizers can seamlessly discover spaces and manage logistics through detailed **Vendor Contracts** and **Venue Bookings**.

Furthermore, the diagrams detail the robust ticketing flow, illustrating how an **Attendee** creates **Registrations** to securely purchase **Tickets** and lock in real-time **Seat Bookings** tied to specific **Ticket Types**. Financial integrity and tracking are maintained by linking overarching event **Budgets** with precise **Budget Items**, **Expenses**, and high-volume **Payments**. Finally, the system ensures reliable user communication by associating **Notifications** with detailed **Delivery Logs**, user preferences, and dynamic templates. Together, these relationships highlight the sophisticated, highly modular flow of data and interaction between users, physical venues, robust finances, and critical infrastructure within the entire EventZen ecosystem.

Need to modify a registration?

Cancellations update the ticket inventory. Use the "Show Cancelled" toggle to view cancelled registrations and permanently remove them from your history.

Invoice availability: Invoices are generated for successful paid registrations and are available across refreshes and devices. Free tickets don't generate invoices. If you don't see an invoice for a paid registration yet, the payment may still be reconciling.

Important: Cancelling a registration does not delete the historical payment invoice that was already issued. Paid registrations remain hidden here until payment is verified successfully.

Event Workspace:

The screenshot displays the EventZen Customer Portal dashboard. The top navigation bar includes links for Home, Events, My Tickets, Registrations, and a highlighted Customer tab. A search bar and notification bell are also present. The left sidebar shows the 'Customer self-service workspace' with a 'Customer Portal' link. The main content area is titled 'Your event workspace' and provides a quick overview of account status. It features four key metrics: Active Registrations (2), Total Spent (₹12,812.00), Checked In (0), and Pending Actions (1). Below these, the 'Overview' section offers a health check and lists pending actions, such as enabling multi-factor authentication. It also shows upcoming event activity (2 live registrations) and a security checklist. A 'Request Becoming a Vendor' section is available on the right for submitting requests to unlock the vendor portal.

Sign In Page:

The image shows a mockup of the EventZen sign-in page. The page is split into two main sections: a dark blue hero section on the left and a white sign-in form on the right.

Hero Section (Left):

- EventZen** logo at the top left.
- A placeholder image of a conference hall with a large screen, captioned "[Image: Conference hall with large screen]".
- Text: "UNIFIED EVENT OPERATIONS".
- Headline: "Plan, launch, and run standout experiences."
- Subtext: "Sign in to coordinate venues, vendors, ticketing, approvals, bookings, and every operational detail in one workspace."
- At the bottom, three circular profile icons labeled "AL", "MK", and "SJ" are shown next to the text "Trusted by 50k+ professionals".

Sign-In Form (Right):

- Section header: "Welcome back" with the subtext "Sign in to continue to your workspace."
- Buttons: "Sign In" (active) and "Create Account".
- Continue as Mayukh: A button with a profile icon, the text "Continue as Mayukh", and the email "mayukhthaldarofficial@gmail.com".
- Link: "or continue with email".
- Email Address: A field with a placeholder "name@company.com" and a red asterisk indicating it is required.
- Password: A field with a placeholder "Enter password" and a red asterisk indicating it is required. A "Forgot password?" link is to the right.
- Sign In Button: A large blue button with the text "Sign In →".
- Footer: "Need an account? [Create account](#)" and "[Back to homepage](#)".

UI and Frontend

The frontend of EventZen is a **modern, highly responsive Single Page Application (SPA)** built using **React 18, Vite, and Tailwind CSS**. It is designed to provide a seamless and interactive experience for all types of users — Customers, Vendors, and Administrators.

The UI layer is deeply integrated with backend microservices through REST APIs and real-time communication using WebSockets, ensuring a dynamic and real-time user experience.

Frontend Architecture Overview

- Built using **React (SPA)** with **Vite** for fast development and optimized builds
- Styled using **Tailwind CSS** for a consistent and responsive design system
- Uses **React Router** for navigation between pages
- Implements **role-based UI rendering** (Admin, Vendor, Customer)
- Uses **Context API + React Query** for state management and API synchronization
- Uses **Axios interceptors** for handling authentication and token refresh

Key UI Features

- Fully responsive across **mobile, tablet, and desktop**
- **Role-based dashboards and navigation**
- **Lazy loading** for performance optimization
- **Reusable component-based design system**
- **Real-time updates (seat booking, notifications)**
- Smooth transitions and loading states for better UX

Landing Page:

The Landing Page acts as the **entry point of the application**. It is designed to provide a visually appealing overview of the platform.

Key functionalities:

- Displays **featured events and highlights**
- Provides quick navigation to:
 - Event discovery
 - Authentication
 - Help and policies
- Includes **call-to-action buttons** like “Explore Events” or “Login”

This page is optimized for **first impressions and user engagement**, ensuring users can quickly understand the platform's purpose.

Event Discovery Page:

This page allows users to **browse and search events** dynamically.

Key features:

- Filtering by:
 - Category
 - Date
 - Location
- Displays event cards with:
 - Banner image
 - Title
 - Date & venue
- Uses backend API /events for real-time data

This module is crucial for **user acquisition and event visibility**, enabling attendees to discover relevant events easily.

Event Details Page:

This page provides **comprehensive information about a selected event**.

Key functionalities:

- Displays:
 - Event description
 - Agenda & sessions
 - Speaker details
- Shows available **ticket types**
- Includes CTA for:
 - Seat selection
 - Ticket booking

It integrates tightly with:

- Event Service (data)
- Ticketing Service (booking flow)

Login Page:

Handles **secure authentication** for users.

Features:

- Login with email & password
- Supports:
 - JWT authentication
 - Refresh tokens
- Integrates MFA (Multi-Factor Authentication)
- Error handling for invalid credentials

This page ensures **secure access control** across the system.

Create Account Page:

Handles **user registration flow**.

Key features:

- Input validation using form schemas
- Email verification via OTP
- Role-based account creation

This module ensures **secure onboarding and identity verification**.

My Tickets Page:

Displays all purchased tickets for a user.

Features:

- Ticket listing with:
 - Event name
 - Status
- Links to ticket pass
- Data fetched from Ticketing Service

This acts as a **digital ticket wallet** for users.

Ticket Pass UI:

Displays a **QR-based digital ticket**.

Key features:

- Unique QR code per ticket
- Scannable at event entry
- Secure and tamper-proof

Used in:

- Check-in system
- Entry validation

Ticket PDF:

My Registrations Page:

Shows all event registrations.

Features:

- Registration status:
 - Confirmed
 - Pending
- Linked with payment system

Helps users track their **event participation history**.

Customer Portal:

Customer Dashboard:

Personalized dashboard for customers.

Features:

- Upcoming events
- Ticket summary
- Notifications

Provides a **centralized user control panel**.

Vendor Portal: Vendor Dashboard:

Dashboard for event organizers/vendors.

Features:

- Event management
- Venue bookings
- Financial overview

This module enables vendors to **manage events end-to-end.**

Event Operations Page:

Used by vendors to manage live events.

Features:

Event editing

Session management

Ticket configuration

This page connects multiple backend services for event lifecycle control.

Venue Bookings Page:

Allows vendors to:

- Browse venues
- Check availability
- Book venues

Integrated with Venue-Vendor Service.

The screenshot displays the EventZen Vendor Portal interface. The top navigation bar includes links for Home, Events, My Tickets, Registrations, and Vendor (highlighted). A search bar and a notifications bell are also present. The left sidebar lists the Vendor Dashboard, Event Operations, Venue Bookings (selected), Check-In Command Center, Vendor Finance, and Vendor Reports. The main content area is titled 'Venue Bookings' and shows 'Upcoming active bookings for the current portal scope.' It includes a search bar, filters for Venue (All Venues), Payment (All Payment States), and Sort (Soonest First). A table displays one booking with details: Booking ID (4ce3224d-5689-46c9-ac52-c470cab80ce5), Booking Owner (mayukhhalder1@gmail.com), Venue (Riverside Culture Yard), Event (AI Governance Bootcamp 2026), Start (Jul 9, 2026, 10:00 AM), End (Jul 9, 2026, 4:30 PM), Duration (7 hrs), Halls (Whole venue), Booking Status (Active), and Payment (Payment pending INR 82,000). A 'Proceed to checkout' button is visible. The page footer indicates 'Page 1 of 1' and provides a hint to use filters to narrow bookings.

BOOKING	BOOKING OWNER	VENUE	EVENT	START	END	DURATION	HALLS	BOOKING STATUS	PAYMENT	ACTIONS
4ce3224d-5689-46c9-ac52-c470cab80ce5 Created: 5/26/2026, 1:43:07 AM	mayukhhalder1@gmail.com Assigned organizer	Riverside Culture Yard Chennai	AI Governance Bootcamp 2026 REGISTRATION, OPEN	Jul 9, 2026, 10:00 AM	Jul 9, 2026, 4:30 PM	7 hrs	Whole venue	Active	Payment pending INR 82,000	Cancel booking Proceed to checkout

The screenshot displays the EventZen Vendor Portal interface, specifically the 'Vendor Catalog' section. The top navigation bar and left sidebar are identical to the previous screenshot. The main content area is titled 'Vendor Catalog' and shows 'Search across vendors, refine by service category, and sort by the most relevant signal.' It includes a search bar, filters for Category (All Categories), and Sort (Highest Rating). A table displays five vendors: Mayukh Halder (SECURITY, 5.0/5 (1)), PulseCraft AV (AV, 4.8/5 (3)), Northstar Catering Collective (CATERING, 4.7/5 (3)), Canvas & Bloom Studio (DECOR, 4.5/5 (2)), and ShieldLine Event Security (SECURITY, 4.5/5 (2)). Each vendor card includes their name, service category, rating, and contact information. The page footer indicates 'Page 1 of 1' and provides a hint to use filters to narrow vendors.

Vendor Name	Service Category	Rating	Contact Info
Mayukh Halder	SECURITY	5.0/5 (1)	mayukhhalder1@gmail.com +919432182153

Privacy

Privacy Policy

Effective date: **March 30, 2026**

EventZen ("we", "us", or "our") is committed to protecting your personal information. This Privacy Policy explains how we collect, use, share, and safeguard your data when you use our platform.

CONTENTS

1. Information We Collect
2. How We Use Your Information
3. Legal Basis for Processing (GDPR)
4. Data Sharing & Disclosure
5. Data Retention
6. Your Rights
7. Cookies
8. Security
9. Children's Privacy
10. Changes to This Policy
11. Contact Us

1. Information We Collect

1.1 Information You Provide Directly

When you create an account, register for events, or contact us, we collect: full name, email address, phone number, billing information (processed securely by Razorpay — we never store card details), event preferences and notes, and any messages you send to our support team.

1.2 Information Collected Automatically

When you use EventZen we automatically collect: IP address, browser type and version, operating system, pages visited and time spent, referring URLs, device identifiers, and cookie/session data. This information is used for security, analytics, and improving platform performance.

1.3 Information from Third Parties

If you sign in using a third-party provider (e.g. Google OAuth), we receive your name and email address from that provider in accordance with your permissions. We do not receive your password.

2. How We Use Your Information

We use the information we collect to: create and manage your EventZen account; process event registrations and payments; send transactional notifications (booking confirmations, payment receipts, event reminders); send newsletter updates if you subscribed (you may unsubscribe at any time); detect and prevent fraud and unauthorised access; comply with legal obligations; and improve our platform.

Unit, Integration and System Testing

Auth Service

Automated System Testing

The screenshot displays the 'EventZen — Auth Service - Run results' page in a web browser. The page shows a summary of test results for the 'Auth Service' environment. The summary table indicates that all 54 tests passed, with a total duration of 13s 553ms and 0 errors. The 'All 54 Passed' status is highlighted in green.

Source	Environment	Iterations	Duration	All tests	Errors	Avg. Resp. Time
Runner	EventZen Auth Service — Local	1	13s 553ms	54	0	408 ms

Below the summary, the test results are listed in a table with columns for 'Iteration', 'Test Name', 'Status', 'Response', and 'Details'. The tests are as follows:

- Iteration 1:**
 - POST Authentication — Auth-ST-001 — Register User**: Status 200 OK. Response has accessToken. User email matches. (200 • 5123 ms • 1.788 KB)
 - POST Authentication — Auth-ST-002 — Register Duplicate Email → 409**: Status 409 Conflict. (409 • 18 ms • 673 B)
 - POST Authentication — Auth-ST-003 — Login with Valid Credentials**: Status 200 OK. accessToken present. (200 • 216 ms • 1.59% KB)
 - POST Authentication — Auth-ST-004 — Login with Wrong Password → 401**: Status 401 Unauthorized. (401 • 99 ms • 664 B)
 - GET Authentication — Auth-ST-005 — Get Current User (GET /me)**: Status 200 OK. Email matches. (200 • 93 ms • 782 B)
 - GET Authentication — Auth-ST-006 — Get Current User Unauthenticated → 401**: Status 401 Unauthorized. (401 • 9 ms • 676 B)

The page also includes a 'New Chat' section on the right, which offers a 'Start using Agent Model' button and a message about AI credits. The bottom of the page shows a Windows taskbar with various application icons and a system clock indicating 06:05 PM on 30-09-2026.

The screenshot displays the Postman interface for a workspace named 'Mayukh Haidar's Workspace'. The main panel shows the 'EventZen - Auth Service - Run results' for a collection named 'EventZen - Auth Service'. The run was executed at 05:59:20 PM. The summary table indicates 54 tests passed, 0 failed, 0 skipped, and 0 errors, with an average response time of 408 ms.

Source	Environment	Iterations	Duration	All tests	Errors	Avg. Resp. Time
Runner	EventZen Auth Service - Local	1	13s 553ms	54	0	408 ms

The test results are listed below the summary table:

- Auth-006 - Get Current User Unauthenticated → 401**: GET request to `http://localhost:8081/api/v1/auth/me`. Status 401 Unauthorized. PASS.
- Auth-007 - Refresh Session Token**: POST request to `http://localhost:8081/api/v1/auth/refresh`. Status 200 OK. PASS.
- Auth-008 - Forgot Password (debug token)**: POST request to `http://localhost:8081/api/v1/auth/forgot-password`. Status 200 OK. PASS.
- Auth-009 - Reset Password with Debug Token**: POST request to `http://localhost:8081/api/v1/auth/reset-password`. Status 200 OK. PASS.
- Auth-010 - Confirm Email Verification**: POST request to `http://localhost:8081/api/v1/auth/email-verification/confirm`. Status 200 OK. PASS.
- Auth-011 - Resend Email Verification**: POST request to `http://localhost:8081/api/v1/auth/email-verification/resend`. Status 200 OK. PASS.

The left sidebar shows a collection tree with 'EventZen - Auth Service' selected. The right sidebar contains a 'New Chat' section with a message about AI credits.

The screenshot displays the Postman interface for a workspace named 'Mayukh Haidar's Workspace'. The main panel shows the 'EventZen - Auth Service - Run results' for a collection named 'EventZen - Auth Service'. The run was executed at 05:59:20 PM. The summary table indicates 54 tests passed, 0 failed, 0 skipped, and 0 errors, with an average response time of 408 ms.

Source	Environment	Iterations	Duration	All tests	Errors	Avg. Resp. Time
Runner	EventZen Auth Service - Local	1	13s 553ms	54	0	408 ms

The test results are listed below the summary table:

- Auth-011 - Resend Email Verification**: POST request to `http://localhost:8081/api/v1/auth/email-verification/resend`. Status 200 OK. PASS.
- Auth-012 - Update Profile**: PATCH request to `http://localhost:8081/api/v1/auth/me/profile`. Status 200 OK. PASS.
- Auth-013 - MFA Setup**: POST request to `http://localhost:8081/api/v1/auth/mfa/setup`. Status 200 OK. PASS.
- Auth-014 - Logout**: POST request to `http://localhost:8081/api/v1/auth/logout`. Status 200 OK. PASS.
- Auth-015 - Bootstrap Admin Token**: POST request to `http://localhost:8081/api/v1/auth/login`. Status 200 OK. PASS.
- Auth-016 - List All Users (Admin)**: GET request to `http://localhost:8081/api/v1/users?page=0&size=20`. Status 200 OK. PASS.

The left sidebar shows a collection tree with 'EventZen - Auth Service' selected. The right sidebar contains a 'New Chat' section with a message about AI credits.

The screenshot displays the EventZer API testing interface, showing test results for the Auth Service. The interface is divided into three main sections: a left sidebar with a collection tree, a central test results table, and a right sidebar with a chat window.

Left Sidebar (Collections):

The screenshot displays the EventZer API testing interface, showing a collection of tests for an authentication service. The interface is divided into several sections:

- Left Sidebar:** Contains a tree view of collections and environments. The 'EventZen - Auth Service' collection is selected, showing a list of tests including 'Auth-ST-001 - Register User', 'Auth-ST-002 - Register Duplicate Email', 'Auth-ST-003 - Login with Valid Credentials', 'Auth-ST-004 - Login with Wrong Password', 'Auth-ST-005 - Get Current User (GET /m...)', 'Auth-ST-006 - Get Current User Unauth...', 'Auth-ST-007 - Refresh Session Token', 'Auth-ST-008 - Forgot Password (debug ...)', 'Auth-ST-009 - Reset Password with Deb...', 'Auth-ST-010 - Confirm Email Verification', 'Auth-ST-011 - Resend Email Verification', 'Auth-ST-012 - Update Profile', 'Auth-ST-013 - MFA Setup', 'Auth-ST-014 - Logout', 'Auth-ST-015 - Bootstrap Admin Token', 'Auth-ST-016 - List All Users (Admin)', 'Auth-ST-016b - List Users without Admi...', 'Auth-ST-017 - Assign Role to User (Admin)', 'Auth-ST-018 - Deactivate User (Admin)', 'Auth-ST-019 - Reactivate User (Admin)', 'Auth-ST-020 - GDPR Delete User (Admin)', 'Auth-ST-021 - Submit Account Request (...)', and 'Auth-ST-022 - List My Account Requests'.
- Top Bar:** Shows the current run status, 'Run today at 05:59:20 PM', and a 'View all runs' link. It also includes buttons for 'Run Again', 'New Run', and 'Share'.
- Table:** A table summarizing the test results. The columns are 'Source', 'Environment', 'Iterations', 'Duration', 'All tests', 'Errors', and 'Avg. Resp. Time'. The data shows a single run with 1 iteration, a duration of 13s 553ms, 54 tests, 0 errors, and an average response time of 408 ms.
- Run Summary:** A detailed view of the test results, showing a list of tests and their status. The tests are listed in a table with columns for 'Test Name', 'Status', and 'Duration'. The tests are: 'Auth-ST-001 - Register User', 'Auth-ST-002 - Register Duplicate Email', 'Auth-ST-003 - Login with Valid Credentials', 'Auth-ST-004 - Login with Wrong Password', 'Auth-ST-005 - Get Current User (GET /m...)', 'Auth-ST-006 - Get Current User Unauth...', 'Auth-ST-007 - Refresh Session Token', 'Auth-ST-008 - Forgot Password (debug ...)', 'Auth-ST-009 - Reset Password with Deb...', 'Auth-ST-010 - Confirm Email Verification', 'Auth-ST-011 - Resend Email Verification', 'Auth-ST-012 - Update Profile', 'Auth-ST-013 - MFA Setup', 'Auth-ST-014 - Logout', 'Auth-ST-015 - Bootstrap Admin Token', 'Auth-ST-016 - List All Users (Admin)', 'Auth-ST-016b - List Users without Admi...', 'Auth-ST-017 - Assign Role to User (Admin)', 'Auth-ST-018 - Deactivate User (Admin)', 'Auth-ST-019 - Reactivate User (Admin)', 'Auth-ST-020 - GDPR Delete User (Admin)', 'Auth-ST-021 - Submit Account Request (...)', 'Auth-ST-022 - List My Account Requests', 'Auth-ST-023 - Public Reactivation Status', 'Auth-ST-024 - Public Reactivation Requ...', 'Auth-ST-025 - Admin List Account Requ...', and 'Auth-ST-026 - Admin Approve Account ...'.
- Right Sidebar:** Contains a 'New Chat' section with a 'Start using Agent Model' button and a 'Run Result for Coll...' section with a 'Describe what you need. Press @ for context, / for Skills.' prompt.

Automated Unit and Integration Testing

The screenshot displays an IDE window for a project named 'auth-service'. The 'Run' tab is active, showing the output of a Maven test execution. The output indicates that all tests passed successfully, with 112 tests run, 0 failures, 0 errors, and 0 skipped. The build is marked as 'BUILD SUCCESS'.

Event Service

Automated System Testing

The screenshot displays the EventZen automated system testing interface. The main window shows the 'EventZen — Event Service - Run results' for a test run completed at 08:03:38 PM. The summary table indicates 1 iteration, a duration of 3m 2s, 21 tests passed, 0 errors, and an average response time of 8600 ms.

Source	Environment	Iterations	Duration	All tests	Errors	Avg. Resp. Time
Runner	EventZen — Event Service (L...	1	3m 2s	21	0	8600 ms

Below the summary, a 'RUN SUMMARY' table lists 21 test cases, all of which passed (1/0).

Test Case	Result
POST EVENT-ST-001 Login as Organizer	1/0
POST EVENT-ST-002 Login as Admin	1/0
GET EVENT-ST-003 List Categories	1/0
POST EVENT-ST-004 Create Event (Organizer)	1/0
GET EVENT-ST-005 Get Event (Public)	1/0
GET EVENT-ST-006 List Events (Public)	1/0
PUT EVENT-ST-007 Update Event (Organizer)	1/0
POST EVENT-ST-008 Add Session	1/0
GET EVENT-ST-009 Get Agenda (Public)	1/0

The Explorer pane on the right shows the project structure for 'TICKETING-SERVICE', including files like 'dotnet-cli', 'src', 'tests', 'dockerignore', 'env', 'env.example', 'gitignore', 'Dockerfile', 'README.md', 'TEST_CASES.md', and 'ticketing-service.sh'.

Finance Service

Automated System Testing

The screenshot displays the 'EventZen - Finance Service - Run results' interface. The left sidebar shows a tree view of collections, including 'AddressBookV3', 'Auth Service System Tests', 'Capstone Project', 'EcommerceMS', 'EcommerceMS Gateway Testing', 'EventZen - Finance Service', 'EventZen - Ticketing Service', 'EventZen - Auth Service', 'EventZen - Event Service', 'Approval Workflow', 'Disable / Enable Flow', 'Cleanup', 'Error Cases', 'KiranaApp C#', 'KiranaAppV1', 'ENVIRONMENTS', 'SPECS', and 'FLOWS'. The main panel shows the 'Run results' for the 'EventZen - Finance Service' collection, which was run today at 10:22:59 PM. The results table lists 20 test cases, all of which passed (100% success rate). The table columns are: Source, Environment, Iterations, Duration, All tests, Errors, and Avg. Resp. Time. The 'Run Summary' section shows a total of 1 test case passed. The 'Comments' section on the right allows for adding new comments.

Automated Unit and Integration-Testing

Notification Service

Automated System Testing

The screenshot displays a REST client interface with a sidebar on the left containing a project tree. The main area shows the 'Run results' for the 'EventZen Notification Service'. A table lists 26 test cases, each with a status icon (green for pass, red for fail) and a duration. The tests include various HTTP methods (GET, PATCH, DELETE, POST, PUT) and endpoints related to attendees, notifications, and subscriptions. A 'Comments' panel on the right allows for adding new comments.

Automated Unit and Integration-Testing

The screenshot shows a terminal window with the output of a test run for the 'notification-service'. The output lists 26 test cases, each with a status (pass/fail) and a duration. The tests include various HTTP methods (GET, PATCH, DELETE, POST, PUT) and endpoints related to attendees, notifications, and subscriptions. The terminal also shows the command 'npm run dev' and the file path 'C:\Users\mayuk\OneDrive\Desktop\Document_Folders_in_Desktop\Deloitte_CloudThat_Capstone_Project\backend\services\notification-service'.

```
✓ NTF-UT-008: parsePagination applies default page=0 size=20 for empty query (1.4673ms)
✓ NTF-UT-009: parsePagination parses numeric page and size and computes skip (0.3075ms)
✓ NTF-UT-010: parsePagination clamps size to 100 maximum (0.2025ms)
✓ NTF-UT-011: parsePagination clamps page to 0 minimum (0.2006ms)
✓ NTF-UT-012: buildPage calculates totalPages and maps content fields (1.1932ms)
✓ NTF-UT-013: buildPage returns totalPages=0 when there are no elements (0.4573ms)
✓ isChannelEnabled returns false when a channel is disabled globally (0.8347ms)
✓ isChannelEnabled honors per-event allow lists (0.1439ms)
✓ NTF-UT-027: isChannelEnabled returns true for an unrecognised channel key (0.6976ms)
✓ NTF-UT-028: isChannelEnabled returns true when preferences object is null (0.1137ms)
✓ NTF-UT-029: isChannelEnabled returns true when eventTypes list is empty (allow all) (0.1ms)
✓ NTF-UT-030: isChannelEnabled blocks events not present in the eventTypes allow-list (0.097ms)
✓ NTF-UT-004: createSignature returns a sha256- prefixed hex string (1.2073ms)
✓ NTF-UT-005: createSignature is deterministic for identical inputs (0.896ms)
✓ NTF-UT-006: createSignature matches a manual HMAC-SHA256 computation (0.132ms)
✓ NTF-UT-007: createSignature produces different digests for different secrets (0.159ms)
✓ NTF-UT-023: renderTemplate returns null html when template html property is null (3.8146ms)
✓ NTF-UT-024: renderTemplate renders static content when variables map is empty (0.6627ms)
✓ NTF-UT-025: renderTemplate applies the registered uppercase Handlebars helper (2.7891ms)
✓ NTF-UT-026: renderTemplate renders missing variable placeholders as empty string (1.3693ms)
✓ renderTemplate interpolates variables into subject and body (10.57ms)

eventzen events:

The screenshot displays the MySQL Workbench interface. The top menu bar includes File, Edit, View, Query, Database, Server, Tools, Scripting, and Help. The left sidebar contains navigation panels for MANAGEMENT (Server Status, Client Connections, Users and Privileges, Status and System Variables, Data Export, Data Import/Restore), INSTANCE (Startup / Shutdown, Server Logs, Options File), and PERFORMANCE (Dashboard, Performance Reports, Performance Schema). The main workspace shows a query in the 'Query 1' tab: `1. use eventzen_events;` and `2. show tables;`. Below the query editor, the 'Result Grid' is visible, showing a list of tables: `event_agenda`, `event_categories`, `event_email_requests`, `event_messages`, `event_tags`, and `events`. The bottom panel, labeled 'Result 1 x', shows the execution output with columns for #, Time, Action, Message, and Duration / Fetch. The output consists of 7 rows, indicating the execution of the query and the listing of tables.

#	Time	Action	Message	Duration / Fetch
1	21:43:26	show tables	0 rows returned	0.000 sec / 0.000 sec
2	21:43:10	select * from users LIMIT 0, 1000	0 rows returned	0.000 sec / 0.000 sec
3	21:50:29	show tables	0 rows returned	0.000 sec / 0.000 sec
4	21:50:48	select * from roles LIMIT 0, 1000	4 rows returned	0.016 sec / 0.000 sec
5	21:54:02	use eventzen_events	0 rows affected	0.000 sec
6	21:54:09	show tables	6 rows returned	0.000 sec / 0.000 sec
7	21:54:09	show tables	6 rows returned	0.000 sec / 0.000 sec

Summary

EventZen is a modern, cloud-native **Event Management and Ticketing Platform** designed to simplify and digitalize the complete event lifecycle for **attendees, organizers, vendors, and administrators**. The platform has been developed as a **full-stack capstone project** with a strong emphasis on **scalability, modularity, security, and real-time user experience**.

The system follows a **polyglot microservices architecture**, integrating technologies such as **Java Spring Boot, .NET, and Node.js** on the backend, while the frontend is built using **React, Vite, and Tailwind CSS** to deliver a highly responsive and user-friendly interface. EventZen is designed to support a wide range of event-related workflows including **event discovery, secure authentication, ticket booking, seat selection, venue booking, payment processing, attendee check-in, notifications, and analytics**.

One of the key highlights of the platform is its **real-time interactive seat booking mechanism**, which enables users to view and reserve available seats dynamically while minimizing race conditions and double bookings. The application also incorporates

OpenStreetMap (OSM) for venue mapping, **Apache Kafka** for asynchronous event-driven communication, **Redis** for caching and performance optimization, and **Docker** for containerized deployment. To strengthen monitoring and maintainability, the platform is supported by an observability stack using **Prometheus, Grafana, and OpenTelemetry**. From a software engineering perspective, EventZen demonstrates practical implementation of **microservices-based system design, RESTful API integration, frontend-backend synchronization, authentication and authorization mechanisms, distributed data handling, and modern DevOps-oriented development practices**. The project reflects a strong focus on solving real-world event management challenges while maintaining a scalable and production-oriented architecture. Overall, EventZen serves as a comprehensive demonstration of **modern full-stack application development**, combining robust backend engineering, intuitive frontend design, and real-world deployment-ready architectural principles into a single unified platform.
